

Injection and Removing of Dyes, PFCL or Triamcinolone without Back-Flush Needle

Author: Laurent Velasque

Advantages:

This personal technic using the vitreotome allows injecting and removing dyes PFCL or Triamcinolon without back flush needle. It reduces intra operative motions and duration of the surgery.

Methods:

The liquid is being injected directly into the vitreotome pipe, and then it can be removed without subsequent gesture.

Effectiveness / Safety:

More than 60 Vitrectomies were performed according to this principle with a good result and a considerable saving of time.
