

3D-OCT Guided Photodynamic Therapy in Cases of Retinochoroidal Anastomoses

Author: Ioannis P. Theocharis

Advantages:

To avoid interventional diagnostic tests such as FA and ICG, using the point to point registration software of Topcons 3D OCT in cases where PDT is indicated, with ensuing benefit in terms of cost of treatment and avoidance of the risks of FA and ICG.

Methods:

Measurement of the treatment diameter with point to point registration and comparison with the measurements of the diameter using the FA images.

Effectiveness / Safety:

Measurements are identical and PDT sessions do not require FA before treatment.
