

## Variations of the visual function according to the therapy

*Author: Malbrel Christian*

### **Purpose:**

Control innocuity of different therapies used in ARMD on color vision and central sensitivity.

### **Methods:**

PDT-TTT-intravitreal triamcinolone-exeresis surgery-radiotherapy were used on several patients with long survey time. Color vision and macular sensitivity data were collected.

### **Results:**

About 1000 data on several years showing evolution of illness and influence of therapy.

### **Conclusion:**

PDT is a safeguard for retinal function if undertaken in time.
