

Stardust – Triamcinolone Acetonide in Macular Surgery

Joseph Moisseiev, MD (Tel Aviv, Israel)

SYNOPSIS

The film demonstrates how injection of Triamcinolone acetonide during vitrectomy improves the visibility of residual cortical vitreous in three cases: a case of vitreomacular traction syndrome, diabetic macular edema in an eye with PDR, and very thin ERM following PVD with multiple retinal breaks. The cases will be presented with OCT, FA and VA results.
