

The Use of Iris Retractors in Vitreoretinal Surgery and in Combined Procedures

Zofia Nawrocka, MD (Lodz,), Jerzy Nawrocki, MD, PhD (Lodz, Poland), Janusz Michalewski, MD (Lodz, Poland), Zofia Michalewska, MD (Lodz, Poland)

SYNOPSIS

The aim of this video is to present the use of iris retractors during vitreous surgery with special attention to combined phacoemulsification - vitrectomy surgery. Different examples both conventional and ultrasmall incision phacoemulsification combined with vitreous surgery performed for PVR retinal detachment, diabetic retinopathy, dislocation of the crystalline lens etc. are presented. Presented technique is safe and effective adjunct of combined surgery.
