

## **2 Cases of Live Intraocular Nematodes Removed Live by Vitrectomy**

Guruprasad S. Ayachit, MS (Hubli, Karnataka, India), Paul E. Tornambe, MD (Poway, CA)

### **SYNOPSIS**

An interesting case of a live intravitreal nematode in a 14 year boy who presented with diminution of vision in the Lt eye of 2 months duration. The video shows the nematode live preoperatively and the surgical procedure of its removal live. Another interesting case of a live subretinal nematode causing blurred vision in a 16 year old boy. The nematode was removed by vitrectomy, live through a retinotomy.
