

# **Modified Technique for Improving Trypan Blue (TB) Staining of Epiretinal Membranes (ERM)**

Stanislao Rizzo, MD (Lucca, Italy), Michele Palla, MD (Pisa, Italy), Federica Genovesi-Ebert, MD, PhD (Pisa, Italy)

## **SYNOPSIS**

In the air-filled vitreous cavity we have instilled first TB and subsequently liquid perfluorocarbon, that due to its high specific gravity pushes down the coloring agent, thus making it spread better on the retinal surface, allowing a more effective and complete ERM staining and removal.
