

Origin of Subretinal Fluid in Optic Disc Pit Maculopathy: β -2 Transferrin Analysis

Ronald C. Gentile, MD (New York, NY), Alfonso Ponce, MD (New York, NY)

SYNOPSIS

A case of an optic disc pit associated maculopathy. 25-gauge vitrectomy with ICG assisted ILM peeling and SRF drainage was performed. ILM adjacent to the pit was removed and the SRF was analyzed. β -2 trans-ferrin levels were not detected and does not support the CSF theory of SRF origin.
